

Ajit C. Awekar

Email: ajitawekar@gmail.com

Phone: +91-9910979709

Address: 118 Kasba Peth, Swanand Shri Society, Pune, Maharashtra, India 411011.

Objective: To develop cutting edge software while adapting state-of-the-art technology.

Work Experience:

Niksun (June, 2008 –Present), Software Engineer in ‘Network Appliance’ team includes building RESTful web Services to the Network appliance using Spring and Hibernate frameworks on FreeBSD platform.

Education:

M. Tech. (Master of Technology),

Computer Science and Engg, Motilal Nehru National Institute of Technology, Allahabad
August 2006- June 2008, CPI: 8.25 / 10.

B. E. (Bachelor of Engineering),

PVG’s College of Engineering and Technology, Pune (affiliated to Pune University)
July 2002 - June 2006, First Class (64.4%)

Higher Secondary Exam (12th)

N.M.V Junior College, Pune (affiliated to State Education Board, Maharashtra)
July 2000 - June 2002, First Class with Distinction (82.1%)

Secondary School Exam (10th)

N.M.V High School, Pune (affiliated to State Education Board, Maharashtra)
June 1994 - May 2000, First Class with Distinction (80.8%)

Skill set:

- Languages: C, C++, Java
- Operating system platform: FreeBSD, Linux, Windows
- Frameworks: Spring, Hibernate
- Database: PostgreSQL
- Web Technologies: JAXB, JAX-WS, Servlets
- Web Server: Apache Tomcat

Achievements:

- 1138 rank in GATE 2006 (94.92 percentile)
- Won first prize in INNOVATION 2006 project competition at Cummins College of Engineering, Pune.
- Stood second in the class in Second year of Engineering.
- Represented school in interschool table tennis competitions.
- Excellent communication and team skills.

Project Details:

Project Name:	NetUsage
Language:	Java
Project Brief:	NetUsage allows user to generate IP based detail records. The application involves IP Billing and allows the appliance data to be polled in configurable manner and interval. Internet Protocol Detailed Records (IPDRs) are generated by the appliance and written into local files. These files can be polled by remote system via File Transfer Protocol (FTP) or Secure Copy (SCP).
My Role	Developer
Responsibility:	▪ Analysis and Design of Netusage ▪ Test cases preparation. ▪ Code review, Unit Testing.

Project Name:	NetDetectorLive
Language:	Java
Project Brief:	NetUsage allows user to generate IP based detail records. The application involves IP Billing and allows the appliance data to be polled in configurable manner and interval. Internet Protocol Detailed Records (IPDRs) are generated by the appliance and written into local files. These files can be polled by remote system via File Transfer Protocol (FTP) or Secure Copy (SCP).
My Role	Developer
Responsibility:	▪ Analysis as well as Configuration for NetDetectorLive. ▪ Code review, Unit Testing.

Academic Projects

Quality of Service for Publish/Subscribe bases MANET: This is my M.Tech thesis. We address the problem of providing reliability of the broker infrastructure and availability in highly dynamic mobile ad hoc network. We provide the algorithm for reliability using 'Pull and Push Approach'. The simulation results show high message delivery with low overhead.

Shodhak: Our project titled "Shodhak" is a set of innovative tools for improving web search experience of common user. Five main features of our project are Meta Search Engine, Simple Personal Messenger, Virtual Search Assistant, Community Viewer and Page Rank algorithm related experiments on a limited domain. We have implemented, tested and experimented with all the five features.

FTP server (mini project): Application consists of concurrent server providing all the functionalities of the ftp. It includes authentication mechanism followed by implementation of commands for file transfer, directory transfer. It also consists of miscellaneous commands to assist the user. We have used TCP/IPv4 sockets in C.
